

# hawes watering cans

the finest watering cans used throughout the world since 1886

2010

includes *fine*  
as rain

This brochure from Haws Watering Cans has been designed for use by garden centres, gift shops and internet retailers. The collections relevant for each are presented under separate headings.

The collection available for garden centres, via the traditional wholesalers, has been reduced to the essential volume lines and there are special pallet deals and point of sale deals available on these lines.

Certain products are only available via the internet or from certain specialist garden centres.

## titanium coloured galva-gard

The basic hot dipped galvanised versions of our watering cans have been favourites for many years. However, the bright shine of a freshly dipped can will fade significantly with age and the quality of the process is very difficult to maintain on a constant basis.

For this reason we have searched for an alternative and developed our new quality finish Titanium Coloured Galva-Gard.

This system has been used to totally replace the finish on the cans in our hot dipped galvanised ranges.

The cans are still hot dipped galvanised to retain all the rust prevention and build quality advantages of the hot galvanising process. However, they are then treated with a titanium coloured lacquer coating which not only achieves a constant quality but also a great look and a silk like texture to the touch every time.

Better still this improvement has been achieved at no extra cost.

PRODUCT CODE: 790/SAG Barcode: 50-12868-790073 rrp £47.50
PRODUCT CODE: 790/RBY Barcode: 50-12868-790059 rrp £47.50
PRODUCT CODE: 790/TTM Barcode: 50-12868-790066 rrp £47.50

Products in this collection are available from good garden centres via garden centre wholesalers and distributors

## Slimcan

The modern, some might say continental, version of the Traditional Can. Designed with a single handle running from front to back, this can is best used two handed but can easily be used single-handed. Made from heavy gauge steel with a hot dip zinc galvanised coating to resist rusting. The slim design is particularly beneficial when carrying the can.
